AX-DSP DIGITAL SIGNAL PROCESSOR

 SALES 800-221-0932

Axxess, a leader in vehicle interfacing, has once again set the industry standard by developing a cost effective option for customers desiring to improve vehicle sound quality with a Digital Signal Processor.

PRODUCT OVERVIEW

The AX-DSP presents an all-in-one solution for a variety of car audio system setups, from fixed level output (digital) to analog OE systems, and even adding a subwoofer to an OE system. Our before the amp solution is designed to allow the installers the option to remove the factory amplifier or to add a subwoofer all while maintaining the OE features and controls of the radio. Whether you have a digital or analog factory amplifier system, the AX-DSP has you covered.

Unlike other Digital Signal Processors on the market, the AX-DSP includes a built-in Axxess Interface. More reasons installers will love the new Axxess DSP is for its quick and simple installation behind the factory radio, due to its small footprint. Features and settings are easily controlled via Bluetooth from our free smartphone application, which is available for both iOS and Android. To further cut down on install time, Axxess has engineered vehicle specific T-Harnesses (sold separately), that make installation even faster and easier, with no need to cut any wires. Using a T-Harness can cut down installation time from 1 hour to just 5 minutes.

- 31 band graphic EQ
- 6 inputs, 6 outputs, including front, rear and subwoofer
- Selectable high and low level inputs
- Front, rear and subwoofer output has an independent two-way crossover in-line with the EQ
- Front and rear speakers can be delayed independently up to 10ms
- Chime control for vehicles with amp-generated chimes
- Clipping detection and limiting circuits
- Retains SYNC and OnStar
- Control the DSP through Bluetooth application
- Smartphone application offering full control from Android and Apple devices
- Read, write, and store your information for future recall
