CAUTION! All accessories, switches, climate controls panels, and especially air bag indicator lights must be connected before cycling the ignition. Also, do not remove the factory radio with the key in the on position, or while the vehicle is running.

**INTERFACE FEATURES**
- (4) Camera inputs
- Reverse signal trigger generated via CAN bus communication of the vehicle
- Turn signal trigger generated via CAN bus communication of the vehicle
- (4) Programmable camera control wires
- Micro-B USB updatable

**REQUIRED ITEMS** (sold separately)
- Crimping tool and connectors, or solder gun, solder, and heat shrink
- Tape
- Wire cutter
- Zip ties

**APPLICATIONS**
- Mazda
  - CX-3 2016-Up
  - CX-9 2016-Up
  - Mazda3 2014-Up

Visit AxxessInterfaces.com for more detailed information about the product and up-to-date vehicle specific applications.
INTRODUCTION

The AXAC-MZ2 is a camera switching interface that provides up to (3) additional camera inputs to the factory radio, while still retaining the factory camera. With this interface a front camera, and/or side cameras, can be added to the factory radio. The cameras function automatically, no human interaction required, unless desired to do so. The interface can also be used if the vehicle doesn’t come equipped with a backup camera, adding up to (4) cameras in this scenario. Axxess recommends cameras from the iBEAM product line for best results.

CONFIGURATION

• Download and install the Axxess Updater available at: AxxessInterfaces.com
• Connect the AXUSB-MCBL update cable (sold separately) between the interface and the computer. The cable will connect into the micro-B USB port in the interface.
• Open the Axxess Updater and wait until the word Ready is listed in the bottom left of the screen.
• Select Add-Cam Configuration.

Continued on the next page
• Select the vehicle in the drop down list. A tab labeled **Configuration** will appear after the vehicle has been selected.

• Under **Configuration**, configure the (4) video trigger inputs to the desired settings. †
• Once all selections have been configured, press **Write Configuration** to save the settings.
• Unplug the update cable from the interface and computer.

† Refer to the following page for more information.
Video trigger legend
- Disable (will turn off the input)
- Backup Camera (dedicated backup camera)
- Left Blinker (will be used for activation)
- Right Blinker (will be used for activation)
- Control 1 (positive trigger activation)
- Control 1 (negative trigger activation)
- Control 2 (positive trigger activation)
- Control 2 (negative trigger activation)
- Control 3 (positive trigger activation)
- Control 3 (negative trigger activation)
- Control 4 (positive trigger activation)
- Control 4 (negative trigger activation)

Video trigger description
- Reverse camera: Dedicated by default to Video Trigger 1. Will activate the backup camera while the vehicle is in reverse.
- Left blinker: Activation of the left turn signal will activate the left camera.
- Right blinker: Activation of the right turn signal will activate the right camera.
- Auto (reverse -> drive): Available only for Video Trigger 4, when installing a front camera. With this feature selected, the camera will activate automatically once a reverse-then-drive sequence is seen from the vehicle. Example of this scenario would be while parallel parking the vehicle. As an alternative, a control wire can be used instead to manually activate the camera.
  Note: Auto (Reverse -> Drive) will disable the camera once 15 MPH is reached. A control wire activated will also disable the camera.
  Note: If the control wire is activated while driving, the camera will activate and deactivate during stop-and-go traffic.
- Control 1-4 (positive or negative) trigger activation wires: Can be used as a positive or negative trigger to manually activate a camera via a toggle switch, or similar device.
CONNECTIONS

For models with a factory backup camera:
The camera signal will need to be interrupted and connected to the corresponding input/output RCA jacks from the interface.

• Connect the RCA jack from the **AXAC-MZ2 vehicle harness** labeled “Camera input”, to the RCA jack from the **AXAC-MZ2 interface harness** labeled “Camera output”.

• Connect the RCA jack from the **AXAC-MZ2 vehicle harness** labeled “Camera output”, to the RCA jack from the **AXAC-MZ2 interface harness** labeled “Camera 1”.

• Disregard the following (3) wires: **Blue/Green, Green/Blue, Red**

For models without a factory backup camera:
• Connect the RCA jack from the **AXAC-MZ2 vehicle harness** labeled “Camera input”, to the RCA jack from the **AXAC-MZ2 interface harness** labeled “Camera output”.

• Connect the RCA jack from the **AXAC-MZ2 interface harness** labeled “Camera 1”, to the aftermarket backup camera.

• Disregard the RCA jack labeled “Camera output” from the **AXAC-MZ2 vehicle harness**.

• Connect the **Red** wire from the **AXAC-MZ2 interface harness** labeled “Camera 12V”, to the power wire from the aftermarket backup camera.

• Disregard the following (2) wires: **Blue/Green, Green/Blue**

Camera Input:
- Camera 1: Backup camera input
- Camera 2: Left or right camera, user assignable
- Camera 3: Left or right camera, user assignable
- Camera 4: Front camera

Analog control trigger wires:
The (optional) analog control wires can be used with either a negative or positive trigger, depending on how they are configured in the Axxess Updater. These wires will only be used for manual control of the camera(s). Otherwise disregard them.

Camera Input:
- Camera 1: Backup camera input
- Camera 2: Left or right camera, user assignable
- Camera 3: Left or right camera, user assignable
- Camera 4: Front camera
**INSTALLATION**

With the ignition cycled off:

1. Remove the harnesses from the factory radio display, then install the **AXAC-MZ2 vehicle harness** in between.
2. Connect the **AXAC-MZ2 vehicle harness** to the **AXAC-MZ2 interface harness**.
3. Connect the **AXAC-MZ2 interface harness** to the **AXAC-MZ2 interface**.
4. Make sure the camera(s) is connected to the appropriate input.
5. Make sure the interface has been configured beforehand as shown in the Configuration section. Failure to configure the interface will result in the interface not functioning properly.

**PROGRAMMING**

For models with a factory backup camera:

1. Cycle the ignition on and wait until the LED in the interface comes on.
   
   **Note:** If the LED doesn’t come on within a few seconds, yet blinks instead, turn the key to the off position, disconnect the interface, check all connections, reconnect the interface, and then try again.

2. Test all functions of the installation for proper operation.

For models without a factory backup camera:

1. Cycle the ignition on.
2. Wait until the Mazda logo is present (dim), then put the vehicle in reverse. Wait until ‘Please Check Surroundings For Safety” is shown, then put the vehicle back in the park position. This process should take within 30 seconds.
3. Test all functions of the installation for proper operation.
