Hyundai **Data Interface with SWC 2012–2016**

**INTERFACE FEATURES**
- Provides NAV outputs (parking brake, reverse, speed sense)
- Retains audio controls on the steering wheel
- Retains BlueLink
- Designed for amplified* and non-amplified models

* Requires the AXSP-HK (sold separately)

- Retains the factory backup camera
- Retains balance and fade
- Micro-B USB updatable

**INTERFACE COMPONENTS**
- AXDIS-HK2 interface
- AXDIS-HK2 harness
- 16-pin harness with stripped leads
- Female 3.5mm connector with stripped leads

**APPLICATIONS**

**TOOLS REQUIRED**
- Wire cutter • Crimp tool • Solder gun • Tape
- Connectors (example: butt-connectors, bell caps, etc.)

**CAUTION!** All accessories, switches, climate controls panels, and especially air bag indicator lights must be connected before cycling the ignition. Also, do not remove the factory radio with the key in the on position, or while the vehicle is running.
CONNECTIONS TO BE MADE

From the 16-pin harness with stripped leads to the aftermarket radio:

• Connect the **Red** wire to the accessory wire.

• If the vehicle comes equipped with a factory amplifier, connect the **Blue/White** wire to the amp turn-on wire.

• If the aftermarket radio has a mute wire, connect the **Brown** wire to it. If the mute wire is not connected, the radio will turn off when BlueLink is activated.

• Connect the **Gray** wire to the right front positive speaker output.

• Connect the **Gray/Black** wire to the right front negative speaker output.

• Connect the **White** wire to the left front positive speaker output.

• Connect the **White/Black** wire to the left front negative speaker output.

• Tape off and disregard the following (9) wires, they will not be used in this application: **Blue/Pink**, **Blue/White**, **Green**, **Green/Black**, **Green/Purple**, **Light Green**, **Orange/White**, **Purple**, **Purple/Black**

* Non-amplified models

From the AXDIS-HK2 harness to the aftermarket radio:

• Connect the **Black** wire to the ground wire.

• Connect the **Yellow** wire to the battery wire.

• Connect the **Blue** wire to the power antenna wire.

• If the aftermarket radio has an illumination wire, connect the **Orange** wire to it.

• Connect the **Green** wire to the left rear positive speaker output.

• Connect the **Green/Black** wire to the left rear negative speaker output.

• Connect the **Purple** wire to the right rear positive speaker output.

• Connect the **Purple/Black** wire to the right rear negative output.

The following (3) wires are only for a multimedia/navigation radio that requires these wires.

• Connect the **Blue/Pink** wire to the VSS/speed sense wire.

• Connect the **Green/Purple** wire to the reverse wire.

• Connect the **Light Green** wire to the parking brake wire.

• Connect the **Red** and **White** RCA jacks to the audio AUX-IN jacks of the aftermarket radio.

• If the vehicle is equipped with a factory backup camera, connect the **Yellow** RCA jack to the backup camera input.

• The 14-pin harness will only be used for models that come equipped with a factory amplifier. Connect the AXSP-HK (sold separately) to this connector.

Continued on the next page
With the key in the off position:

• Connect the 16-pin harness with stripped leads, and the AXDIS-HK2 harness, into the interface.

• For models equipped with a factory amplifier, connect the AXSP-HK (sold separately) to the interface.

Attention! Do not connect the AXDIS-HK2 harness to the wiring harness in the vehicle just yet.

Attention! If retaining steering wheel controls, ensure that the jack/wire is connected to the radio before proceeding. If this step is skipped, the interface will need to be reset for the steering wheel controls to function.

**CONNECTIONS TO BE MADE**

3.5mm jack steering wheel control retention:

• The 3.5mm jack is to be used to retain audio controls on the steering wheel control.

• For the radios listed below, connect the female 3.5mm connector with stripped leads, to the male 3.5mm SWC jack from the AXDIS-HK2 harness. Any remaining wires tape off and disregard:

  • **Eclipse**: Connect the steering wheel control wire, normally **Brown**, to the **Brown/White** wire of the connector. Then connect the remaining steering wheel control wire, normally **Brown/White**, to the **Brown** wire of the connector.

  • **Metra OE**: Connect the steering wheel control Key 1 wire (Gray) to the **Brown** wire.

  • **Kenwood or select JVC with a steering wheel control wire**: Connect the **Blue/Yellow** wire to the **Brown** wire.

  • **XITE**: Connect the steering wheel control SWC-2 wire from the radio to the **Brown** wire.

  • **Parrot Asteroid Smart or Tablet**: Connect the 3.5mm jack into the AXSWCH-PAR (sold separately), and then connect the 4-pin connector from the AXSWCH-PAR into the radio.

  **Note**: The radio must be updated to rev. 2.1.4 or higher software.

  • **Universal “2 or 3 wire” radio**: Connect the steering wheel control wire, referred to as Key-A or SWC-1, to the **Brown** wire of the connector. Then connect the remaining steering wheel control wire, referred to as Key-B or SWC-2, to the **Brown/White** wire of the connector. If the radio comes with a third wire for ground, disregard this wire.

  **Note**: After the interface has been programmed to the vehicle, refer to the manual provided with the radio for assigning the SWC buttons. Contact the radio manufacturer for more information.

  • **For all other radios**: Connect the 3.5mm jack from the AXDIS-HK2 harness, into the jack on the aftermarket radio designated for an external steering wheel control interface. Please refer to the aftermarket radios manual if in doubt as to where the 3.5mm jack goes to.
For the steps below, the L.E.D. located inside the interface can only be seen while active. The interface does not need to be opened to see the L.E.D.

- Start the vehicle.
- Connect the AXDIS-HK2 harness to the wiring harness in the vehicle.
- The L.E.D. will initially turn on solid **Green**, then turn off for a few seconds while it auto detects the radio installed.
- The L.E.D. will then flash **Red** up to (18) times indicating which radio is connected to the interface, and then turn off for a couple of seconds. Pay close attention to how many **Red** flashes there are. This will help in troubleshooting, if need be. Refer to the L.E.D. feedback section for more information.
- After a couple seconds the L.E.D. will turn on solid **Red** while the interface auto detects the vehicle. The radio will shut off at this point. This process should take 5 to 30 seconds.
- Once the vehicle has been auto detected by the interface, the L.E.D. will turn on solid **Green**, and the radio will come back on, indicating programming was successful.
- Test all functions of the installation for proper operation, before reassembling the dash.
- If the interface fails to function, refer to Resetting the AXDIS-HK2.

**Note:** The L.E.D. will turn on solid **Green** for a moment, and then turn off under normal operation after the key has been cycled.

---

**L.E.D. feedback**

The (18) **Red** L.E.D. flashes represent which brand radio the AXDIS-HK2 is connected to. Each flash represents a different radio manufacturer. For example, if you are installing a JVC radio, the AXDIS-HK2 will flash **Red** (5) times, and then stop. Following is a legend that dictates which radio Manufacturer corresponds to which flash.

**L.E.D. feedback legend**

- 1 flash - Eclipse (Type 1)
- 2 flashes - Kenwood
- 3 flashes - Clarion (Type 1)
- 4 flashes - Sony / Dual
- 5 flashes - JVC
- 6 flashes - Pioneer / Jensen
- 7 flashes - Alpine
- 8 flashes - Visteon
- 9 flashes - Valor
- 10 flashes - Clarion (Type 2)
- 11 flashes - Metra OE
- 12 flashes - Eclipse (Type 2)
- 13 flashes - LG
- 14 flashes - Parrot
- 15 flashes - XITE
- 16 flashes - Philips
- 17 flashes - TBD
- 18 flashes - JBL

**Note:** If the AXDIS-HK2 flashes **Red** (7) times, and you do not have an Alpine radio connected to it, that means the interface does not detect a radio connected to it. Verify that the 3.5mm jack is connected to the correct steering wheel jack/wire in the radio.

**Note:** The AXSWCH-PAR is required (sold separately). Also, the Parrot radio must be updated to rev. 2.1.4 or higher through www.parrot.com.

**Note:** If you have a Clarion radio and the steering wheel controls do not work, change the radio type to the other Clarion radio type; same for Eclipse. Refer to the “Programming Information” document online.

**Note:** If you have a Kenwood radio and the L.E.D. feedback comes back as showing as a JVC radio, change the radio type to a Kenwood. Refer to the “Programming Information” document online.

Continued on the next page
### Changing radio type

If the LED flashes do not match the radio you have connected, you must manually program the AXDIS-HK2 to tell it what radio it is connected to.

1. After (3) seconds of turning the key on, press and hold the Volume-Down button on the steering wheel until the L.E.D. in the AXDIS-HK2 goes solid.
2. Release the Volume-Down button; the L.E.D. will go out indicating we are now in Changing Radio Type mode.
3. Refer to the Radio Legend to know which radio number you would like to have programmed.
4. Press and hold the Volume-Up button until the L.E.D. goes solid, and then release. Repeat this step for the desired radio number you have selected.
5. Once the desired radio number has been selected, press and hold the Volume-Down button on the steering wheel until the L.E.D. goes solid. The L.E.D. will remain on for about (3) seconds while it stores the new radio information.
6. Once the L.E.D. goes off, the Changing Radio Type mode will then end. You can now test the steering control wheel controls.

**Note:** If at any time the user fails to press any button for a period longer than (10) seconds, this process will abort.

### Radio legend

1. Eclipse (Type 1)  
2. Kenwood  
3. Clarion (Type 1)  
4. Sony/Dual  
5. JVC  
6. Pioneer/Jensen  
7. Alpine  
8. Visteon  
9. Valor  
10. Clarion (Type 2)  
11. Metra OE  
12. Eclipse (Type 2)  
13. LG  
14. Parrot  
15. XITE  
16. Philips  
17. TBD  
18. JBL

### Remapping the steering wheel control buttons

Once the AXDIS-HK2 has been programmed, the button assignment for the steering wheel controls may be reassigned if so desired. For example, if the Seek-Up button is preferred to be the Mute button instead. Follow the steps below to remap the steering wheel control buttons:

1. Ensure the AXDIS-HK2 is visible so you can see the L.E.D. flashes to confirm button recognition.

**Tip:** Turning the radio off is recommended.

2. Within the first twenty seconds of turning the ignition on, press and hold the Volume-Up button on the steering wheel until the L.E.D. goes solid.
3. Release the Volume-Up button, the L.E.D. will then go out; The Volume-Up button has now been programmed.
4. Follow the list in the Button Assignment Legend to reference the order in which the steering wheel control buttons need to be programmed.

**Continued on the next page**
Note: If the next function on the list is not on the steering wheel, press the Volume-Up button for (1) second until the L.E.D. comes on, and then release the Volume-Up button. This will tell the AXDIS-HK2 that this function is not available and it will move on to the next function.

5. To complete the remapping process, press and hold the Volume-Up button on the steering wheel until the L.E.D. in the AXDIS-HK2 goes out.

Dual assignment instructions (long button press)
The AXDIS-HK2 has the capability to assign (2) functions to a single button, except Volume-Up and Volume-Down. Follow the steps below to program the button(s) to the desired setting.

Note: Seek-Up and Seek-Down come pre-programmed as Preset-Up and Preset-Down for a long button press.

1. Turn the key to the ignition but do not start the vehicle.
2. Press and hold the desired steering wheel control button for (10) seconds, or until the L.E.D. flashes rapidly. At this point release the button; the L.E.D. will then go solid.
3. Press and release the Volume-Up button the number of times corresponding to the new button number selected. Refer to the Dual Assignment Legend. The L.E.D. will flash rapidly while the Volume-Up button is being pressed, and then go back to a solid L.E.D. once released. Proceed to the next step once the Volume-Up button has been pressed the desired number of times.
   Caution: If more than (10) seconds elapses between pressing the Volume-Up button, this procedure will abort, and the L.E.D. will go out.
4. Press the desired button to store it to memory. The L.E.D. will now go out indicating the new information has been stored to memory.
   Note: These steps must be repeated for each button desired to assign a dual assignment feature to. To reset a button back to its default state, repeat Step 1, then press the Volume-Down button. The L.E.D. will go out, and the dual assignment feature for that button will be erased.

**TROUBLESHOOTING**

**Resetting the AXDIS-HK2**

1. The **Blue** reset button is located inside the interface, between the two connectors. The button is accessible outside the interface, no need to open the interface.

2. Press and hold the reset button for two seconds, and then let go to reset the interface.

3. Refer to “Programming the Interface” from this point.
IMPORTANT

If you are having difficulties with the installation of this product, please call our Tech Support line at 1-800-253-TECH. Before doing so, look over the instructions a second time, and make sure the installation was performed exactly as the instructions are stated. Please have the vehicle apart and ready to perform troubleshooting steps before calling.
