**AXDIS-HK3 INSTALLATION INSTRUCTIONS**

Attention! Let the vehicle sit with the key out of the ignition for a few minutes before removing the factory radio. When testing the aftermarket equipment, ensure that all factory equipment is connected before cycling the key to ignition.

**INTERFACE FEATURES**

- Provides accessory power (12-volt 10-amp)
- Provides NAV outputs (park brake, reverse, speed sense)
- Retains audio controls on the steering wheel
- Designed for amplified† and non-amplified models
- Retains the factory AUX-IN jack
- Retains the factory backup camera
- Includes an AXCSD-6V 12-to-6V step-down for the factory camera
- Retains balance and fade‡
- Micro-B USB updatable

‡ Requires the AXSP-HK (sold separately)

† Non-amplified models only

**INTERFACE COMPONENTS**

- AXDIS-HK3 interface • AXDIS-HK3 harness
- AXCSD-6V • 16-pin harness with stripped leads
- Female 3.5mm connector with stripped leads

**OPTIONAL ACCESSORIES** (sold separately)

SPDIF Interface: AXSP-HK interface

REV. 1/22/20 INSTAXDIS-HK3
From the 16-pin harness with stripped leads to the aftermarket radio:

- Connect the Red wire to the accessory wire.
- If the vehicle comes equipped with a factory amplifier, connect the Blue/White wire to the amp turn-on wire.
- Connect the Gray wire to the right front positive speaker output.
- Connect the Gray/Black wire to the right front negative speaker output.
- Connect the White wire to the left front positive speaker output.
- Connect the White/Black wire to the left front negative speaker output.
- Connect the Green/Purple wire to the reverse wire, and also to the Blue/White wire from the AXCSD-6V.

The following (1) wire is only for a multimedia/navigation radio that requires this wire.

- Connect the Light Green wire to the parking brake wire.
- Tape off and disregard the following (8) wires, they will not be used in this application: Blue/Pink, Blue/White*, Brown, Green, Green/Black, Orange/White, Purple, Purple/Black

* Non-amplified models only

From the AXDIS-HK3 harness to the aftermarket radio:

- Connect the Black wire, the Black wire labeled “Camera Ground”, and also the Black wire from the AXCSD-6V, to the ground wire.
- Connect the Red wire labeled “Camera Power 6V”, to the Blue/Red wire from the AXCSD-6V.
- Connect the Yellow wire to the battery wire.
- Connect the Blue wire to the power antenna wire.
- If the aftermarket radio has an illumination wire, connect the Orange wire to it.

Continued on the next page
The following (1) wire is only for a multimedia/navigation radio that requires this wire.

- Connect the Blue/Pink wire to the VSS/speed sense wire.
- If the factory AUX-IN jack is desired to be retained, connect the Red & White RCA jacks to the audio AUX-IN jacks.
- Connect the Yellow RCA jack to the backup camera input.

For models equipped without a factory amplifier:

- Connect the Green wire to the left rear positive speaker output.
- Connect the Green/Black wire to the left rear negative speaker output.
- Connect the Purple wire to the right rear positive speaker output.
- Connect the Purple/Black wire to the right rear negative output.
- Disregard the 14-pin connector, it will not be used in this application.

For models equipped with a factory amplifier:

- Connect the AXSP-HK (sold separately) to the 14-pin connector.
- Tape off and disregard the following (4) wires, they will not be used in this application: Green, Green/Black, Purple, Purple/Black

3.5mm jack steering wheel control retention:

The 3.5mm jack is to be used to retain audio controls on the steering wheel control.

- For the radios listed below: Connect the female 3.5mm connector with stripped leads, to the male 3.5mm SWC jack from the AXDIS-HK3 harness. Any remaining wires tape off and disregard.
  - Eclipse: Connect the steering wheel control wire, normally Brown, to the Brown/White wire from the connector. Then connect the remaining steering wheel control wire, normally Brown/White, to the Brown wire from the connector.
  - Metra OE: Connect the steering wheel control Key 1 wire (Gray) to the Brown wire.
  - Kenwood or select JVC with a steering wheel control wire: Connect the Blue/Yellow wire to the Brown wire.
  - Note: If the Kenwood radio auto detects as a JVC, manually set the radio type to Kenwood. See the instructions under Changing Radio Type.
  - XITE: Connect the steering wheel control SWC-2 wire from the radio to the Brown wire.
  - Parrot Asteroid Smart or Tablet: Connect the 3.5mm jack to the AXSWCH-PAR (sold separately). Then connect the 4-pin connector from the AXSWCH-PAR to the radio.
  - Note: The radio must be updated to rev. 2.1.4 or higher software.
  - Universal “2 or 3 wire” radio: Connect the steering wheel control wire, referred to as Key-A or SWC-1, to the Brown wire from the connector. Then connect the remaining steering wheel control wire, referred to as Key-B or SWC-2, to the Brown/White wire from the connector. If the radio comes with a third wire for ground, disregard this wire.
  - Note: After the interface has been programmed to the vehicle, refer to the manual provided with the radio for assigning the SWC buttons. Contact the radio manufacturer for more information.
  - For all other radios: Connect the 3.5mm jack from the AXDIS-HK3 harness to the jack on the radio designated for an external steering wheel control interface. Please refer to the aftermarket radios manual if in doubt as to where the 3.5mm jack goes to.
**INSTALLATION**

With the key in the off position:

1. Connect the 16-pin harness with stripped leads, and the AXDIS-HK3 harness, to the AXDIS-HK3 interface.

**Attention!** Do not connect the AXDIS-HK3 harness to the wiring harness in the vehicle just yet.

**Attention!** If retaining steering wheel controls, ensure that the jack/wire is connected to the radio before proceeding. If this step is skipped, the AXDIS-HK3 interface will need to be reset for the steering wheel controls to function.

**PROGRAMMING**

For the steps below, the L.E.D. located inside the AXDIS-HK3 interface can only be seen while active. The interface does not need to be opened to see the L.E.D.

1. Start the vehicle.
2. Connect the AXDIS-HK3 harness to the wiring harness in the vehicle.
3. The L.E.D. will initially turn on solid Green, then turn off for a few seconds while it auto detects the radio installed.
4. The L.E.D. will then flash Red up to (18) times indicating which radio is connected to the interface, and then turn off for a couple of seconds. Pay close attention to how many red flashes there are. This will help in troubleshooting, if need be. Refer to the L.E.D. feedback section for more information.

5. After a couple seconds the L.E.D. will turn on solid Red while the interface auto detects the vehicle. The radio will shut off at this point. This process should take 5 to 30 seconds.
6. Once the vehicle has been auto detected by the interface, the L.E.D. will turn on solid Green, and the radio will come back on, indicating programming was successful.
7. Cycle the key off, then back on. If the driver’s door is closed, open and close the door.
8. Test all functions of the installation for proper operation, before reassembling the dash.
9. If the interface fails to function, refer to the Troubleshooting section.

**Note:** The L.E.D. will turn on solid Green for a moment, and then turn off under normal operation after the key has been cycled.

**AUDIO LEVEL ADJUSTMENT** *(AMPLIFIED MODELS ONLY)*

1. With the vehicle and radio turned on, turn the volume up 3/4 of the way.
2. With a small flat-blade screwdriver, adjust the potentiometer clockwise to raise the audio level; counter clockwise to lower the audio level.
3. Once at a desired level, audio adjustment is complete.
STEERING WHEEL CONTROL SETTINGS

L.E.D. feedback

The (18) Red L.E.D. flashes represent the radio the AXDIS-HK3 interface believes it’s connected to. Each flash represents a different radio Manufacturer. For example, if you are installing a JVC radio, the AXDIS-HK3 interface will flash Red (5) times, and then stop. Following is a legend that dictates which radio Manufacturer corresponds to which flash.

L.E.D. feedback legend

<table>
<thead>
<tr>
<th>Flash Count</th>
<th>Radio</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Eclipse (type 1) †</td>
</tr>
<tr>

</tr>
</tbody>
</table>

* If the AXDIS-HK3 interface flashes Red (7) times, and you do not have an Alpine radio connected to it, that means the AXDIS-HK3 interface does not detect a radio connected to it. Verify that the 3.5mm jack is connected to the correct steering wheel jack/wire in the radio.

** The AXSWCH-PAR is required (sold separately). Also, the Parrot radio must be updated to rev. 2.1.4 or higher through www.parrot.com.

† If you have a Clarion radio and the steering wheel controls do not work, change the radio type to the other Clarion radio type; same for Eclipse. The following section explains how to do this.

‡ If you have a Kenwood radio and the L.E.D. feedback comes back showing as a JVC radio, change the radio type to Kenwood. The following section explains how to do this.

Attention: The Axxess Updater App can also be used to program the following (3) sub-sections as well, pending that the AXDIS-HK3 interface has been programmed and is functional.

Changing radio type

If the L.E.D. flashes do not match the radio you have connected, you must manually program the AXDIS-HK3 interface to tell it what radio it is connected to.

1. After (3) seconds of turning the key on, press and hold the Volume Down button on the steering wheel until the L.E.D. in the AXDIS-HK3 interface goes solid.

2. Release the Volume Down button; the L.E.D. will go out indicating the AXDIS-HK3 interface is in Changing Radio Type mode.

3. Refer to the Radio Legend to know which radio number you would like to have programmed.

4. Press and hold the Volume Up button until the L.E.D. goes solid, then release. Repeat this step for the desired radio number you have selected.

5. Once the desired radio number has been selected, press and hold the Volume Down button on the steering wheel until the L.E.D. goes solid. The L.E.D. will remain on for about (3) seconds while it stores the new radio information.

6. Once the L.E.D. goes out, the Changing Radio Type mode will then end. You can now test the steering control wheel controls.

Note: If at any time the user fails to press any button for a period longer than (10) seconds, this process will abort.

Continued on the next page
Remapping the steering wheel control buttons

Once the AXDIS-HK3 interface has been programmed, the button assignment for the steering wheel controls may be reassigned if so desired. For example, if Seek Up is preferred to be Mute instead. Follow the steps below to remap the steering wheel control buttons.

1. Ensure that the AXDIS-HK3 interface is visible so you can see the L.E.D. flashes to confirm button recognition.
   Tip: Turning the radio off is recommended.

2. Within the first twenty seconds of turning the ignition on, press and hold the Volume Up button on the steering wheel until the L.E.D. goes solid.

3. Release the Volume Up button, the L.E.D. will then go out. The Volume Up button has now been programmed.

4. Follow the list in the Button Function Legend to reference the order in which the steering wheel control buttons need to be programmed.
   Note: If the next function on the list is not present on the steering wheel, press the Volume Up button for (1) second until the L.E.D. comes on to skip that function, then release the Volume Up button. This will tell the AXDIS-HK3 interface that this function is not available, and to move on to the next function.

5. To complete the remapping process, press and hold the Volume Up button until the L.E.D. in the AXDIS-HK3 interface goes out.

Note: Some radios may not have these commands. Please refer to the manual provided with the radio, or contact the radio Manufacturer for specific commands recognized by that particular radio.

Dual assignment instructions (long button press)

The AXDIS-HK3 interface has the capability to assign (2) functions to a single button, except Volume Up and Volume Down. Follow the steps below to program the button(s) to the desired setting.

Note: Seek Up and Seek Down come pre-programmed as Preset Up and Preset Down for a long button press.

1. Turn the key to ignition but do not start the vehicle.
2. Press and hold the desired steering wheel control button for (10) seconds, or until the L.E.D. flashes rapidly. At this point release the button; the L.E.D. will then go solid.
3. Press and release the Volume Up button the number of times corresponding to the new button number selected. Refer to the Dual Assignment Legend. The L.E.D. will flash rapidly while the Volume Up button is being pressed, and then go back to a solid L.E.D. once released. Proceed to the next step once the Volume Up button has been pressed the desired number of times.
   Caution: If more than (10) seconds elapses between pressing the Volume Up button, this procedure will abort, and the L.E.D. will go out.
4. Press the desired button to store it to memory. The L.E.D. will now go out indicating the new information has been stored to memory.

Note: These steps must be repeated for each button desired to assign a dual assignment feature to. To reset a button back to its default state, repeat Step 1, then press the Volume Down button. The L.E.D. will go out, and the dual assignment feature for that button will be erased.

### TROUBLESHOOTING

#### Resetting the AXDIS-HK3

1. **The Blue** reset button is located inside the AXDIS-HK3 interface, between the two connectors. The button is accessible outside the AXDIS-HK3 interface, no need to open the AXDIS-HK3 interface.

2. Press and hold the reset button for two seconds, then let go to reset the AXDIS-HK3 interface.

3. Refer to Programming from this point.

---

If you are having difficulties with the installation of this product, contact our Tech Support line either by phone at 1-800-253-TECH, or email at techsupport@metra-autosound.com. Before doing so, look over the instruction booklet a second time and ensure that the installation was performed exactly as the instruction booklet is stated. Have the vehicle apart and ready to perform troubleshooting steps before contacting Metra/Axxess Tech Support.

Metra recommends MECP certified technicians
