CAUTION! All accessories, switches, climate controls panels, and especially air bag indicator lights must be connected before cycling the ignition. Also, do not remove the factory radio with the key in the on position, or while the vehicle is running.

INTERFACE FEATURES
- Provides accessory power
- Retains R.A.P. (retained accessory power)
- Designed for non-amplified models, or amplified models
- Provides NAV outputs (parking brake, reverse, speed sense)
- Retains audio controls on the steering wheel
- Retains balance and fade
- Retains most of the vehicle information that was displayed on the factory radio *
- Compatible with Fender amp
- Micro-B USB updatable

* Attention! The aftermarket radios backup camera input will be used to display the vehicle settings. If the radio doesn’t have a backup camera input, then there will be no visualization of the vehicle settings. An externally mounted screen could be substituted in this situation.

TABLE OF CONTENTS
Connections to be made ....................................2-3
Installing the AXDIS-VW1 interface.......................3
Programming the AXSWC interface .....................4
Screen operation..............................................5-6

TOOLS REQUIRED
- Wire cutter • Crimp tool • Solder gun • Tape
- Connectors (example: butt-connectors, bell caps, etc.)

CAUTION! All accessories, switches, climate controls panels, and especially air bag indicator lights must be connected before cycling the ignition. Also, do not remove the factory radio with the key in the on position, or while the vehicle is running.
From the aftermarket radio to the AXDIS-VW1 harness:

- Connect the Black wire to the ground wire.
- Connect the Yellow wire to the battery wire.
- Connect the Red wire to the accessory wire.
- If the aftermarket radio has an illumination wire, connect the Orange wire to it.
- Connect the Blue wire to the power antenna turn-on wire.
- Connect the Brown wire to the mute wire.
- Connect the White wire to the left front positive speaker output.
- Connect the White/Black wire to the left front negative speaker output.
- Connect the Gray wire to the right front positive speaker output.
- Connect the Green wire to the left rear positive speaker output.
- Connect the Green/Black wire to the left rear negative speaker output.
- Connect the Purple wire to the right rear positive speaker output.
- Connect the Purple/Black wire to the right rear negative speaker output.

The following (3) wires are only for multimedia/navigation radios that require these wires.

- Connect the Blue/Pink wire to the VSS/speed sense wire.
- Connect the Green/Purple wire to the reverse wire.
- Connect the Light Green wire to the parking brake wire.

From the aftermarket radio to the AXSWC harness:

This harness is only to be used if the vehicle is equipped with steering wheel controls or a backup camera.

- Connect the Red wire to the accessory wire.
- For the radios listed below, connect the female 3.5mm connector with stripped leads, to the male 3.5mm SWC jack from the AXSWC harness. Any remaining wires tape off and disregard:
  - Eclipse: Connect the steering wheel control wire, normally Brown, to the Brown/White wire of the connector. Then connect the remaining steering wheel control wire, normally Brown/White, to the Brown wire of the connector.
  - Metra OE: Connect the steering wheel control Key 1 wire (Gray) to the Brown wire.
  - Kenwood or select JVC with a steering wheel control wire: Connect the Blue/Yellow wire to the Brown wire.
  - XITE: Connect the steering wheel control SWC-2 wire from the radio to the Brown wire.
  - Parrot Asteroid Smart or Tablet: Connect the 3.5mm jack into the AXSWCH-PAR (sold separately), and then connect the 4-pin connector from the AXSWCH-PAR into the radio.
  - Universal “2 or 3 wire” radio: Connect the steering wheel control wire, referred to as Key-A or SWC-1, to the Brown wire of the connector. Then connect the remaining steering wheel control wire, referred to as Key-B or SWC-2, to the Brown/White wire of the connector. If the radio comes with a third wire for ground, disregard this wire.

Note: The radio must be updated to rev. 2.1.4 or higher software.

Note: After the interface has been programmed to the vehicle, refer to the manual provided with the radio for assigning the SWC buttons. Contact the radio manufacturer for more information.
With the key in the off position:
- Connect the AXDIS-VW1 harness to the AXDIS-VW1 interface, and then to the wiring harness in the vehicle.
- Connect the AXSWC harness to the AXSWC interface, and then to the AXDIS-VW1 interface.

**Note:** The aftermarket radios backup camera input will be used to display the vehicle settings. If the radio doesn’t have a backup camera input, then there will be no visualization of the vehicle settings. An externally mounted screen could be substituted in this situation.

- If installing an aftermarket backup camera, connect the Yellow female RCA jack labeled “To Reverse Camera”, to the camera.

**CONNECTIONS TO BE MADE (CONT.)**

- **For all other radios**: Connect the 3.5mm jack from the AXSWC harness, into the jack on the aftermarket radio designated for an external steering wheel control interface. Please refer to the aftermarket radios manual if in doubt as to where the 3.5mm jack goes to.
- Connect the Yellow male RCA jack labeled “To Reverse Camera Input (Radio)”, to the backup camera input.
- If installing an aftermarket backup camera, connect the Yellow female RCA jack labeled “To Reverse Camera”, to the camera.
• Press and hold the Volume-Up button on the steering wheel.

• Turn the ignition on, the L.E.D. in the AXSWC interface will start flashing rapidly, which means the AXSWC is looking for the vehicle and the radio.

**Note:** If the L.E.D. did not start flashing rapidly, press the reset button for 3 seconds, while still holding the Volume-Up button.

• After a few seconds the L.E.D. should stop flashing rapidly, and then go out for approximately 2 seconds.

• After approximately 2 seconds there will be a series of 7 Green flashes, some short, and some long. The long flashes represent the wires that are connected to the AXSWC. The 3rd, 4th, 5th, and 6th flashes should be longer.

**Tip:** Knowing this will help to troubleshoot, if need be.

• The L.E.D. will pause for another 2 seconds, and then flash Red up to 18 times depending on which radio is connected to the AXSWC. Refer to the L.E.D. feedback section for information.

• This is the end of the auto detection stage. Release from holding the Volume-Up button. If the AXSWC detected the vehicle and the radio successfully, the L.E.D. will light up solid.

• Test the steering wheel controls for proper operation. Refer to the AXSWC instructions online at axxessinterfaces.com for customizing the buttons, if so desired.

---

**L.E.D. feedback**

The (18) Red L.E.D. flashes represent what brand radio the AXSWC believes it is connected to. Each flash represents a different radio manufacturer. For example, if you are installing a JVC radio, the AXSWC will flash (5) times. Following is a legend that dictates which manufacturer corresponds to which flash.

**L.E.D. feedback legend**

<table>
<thead>
<tr>
<th>Flash Count</th>
<th>Radio Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 flash</td>
<td>Eclipse (Type 1) †</td>

</tbody>
</table>

* **Note:** If the AXSWC flashes Red (7) times, and you do not have an Alpine radio connected to it, that means the AXSWC does not detect a radio connected it. Verify that the 3.5mm jack is connected to the correct steering wheel jack/wire in the radio.

**Note:** Part number AXSWCH-PAR is required (sold separately). Also, the Parrot radio must be updated to rev. 2.1.4 or higher through www.parrot.com.

† **Note:** If you have a Clarion radio and the steering wheel controls do not work, change the radio type to the other Clarion radio type; same for Eclipse. The following section explains how to do this.

‡ **Note:** If you have a Kenwood radio and the L.E.D. feedback comes back as showing as a JVC radio, change the radio type to a Kenwood. Refer to the “Programming Information” document online.
Configuration Menu

- The buttons on the steering wheel will be used to operate the configuration menu, which will be shown on the aftermarket radio. To enable the menu, push and hold the Talk button for 2 seconds. Use the Track Up and Track Down buttons to navigate through the menu. To select a menu option, push the Talk button once.

Screen Size/Position

- Make sure all 4 corner markers are touching the corners of the aftermarket radios display.

Picture Settings

- Adjust brightness, contrast, and color saturation.
Vehicle Settings

- **Driver Position** - Select “Left” or “Right” depending upon vehicle configuration.
- **Amplifier Settings** - This setting can be used to adjust the gain of the aftermarket radio to match the factory amplifier.

**Note:** This option is only available when a factory Fender amplifier is detected in the vehicle.

Preferences

- **Park Assist Version** - Select according to the color configuration of the park assist fitted to the vehicle.
- **Camera Connected** - Select “Yes” if an optional backup camera will be installed.
- **Reverse Priority** - Select which image will be shown while the vehicle is in reverse. Options are Camera or Park Assist. The driver can select the desired image by pushing the Source button while in reverse.

**Note:** This option is only available if “Camera Connected” is set to “Yes”.
- **Park Brake Source** - Set to Speed, Brake, or Always On.
- **Restore Factory Settings** - Reverts all interface settings back to factory defaults. This will not restore the vehicle settings.
