VW Data Interface 2002-2017
Visit AxxessInterfaces.com for more detailed information about the product and up-to-date vehicle specific applications

Attention! Let the vehicle sit with the key out of the ignition for a few minutes before removing the factory radio. When testing the aftermarket equipment, ensure that all factory equipment is connected before cycling the key to ignition.

INTERFACE FEATURES
• Provides accessory power (12-volt 10-amp)
• Maintains the retained accessory power (R.A.P.) feature
• Provides NAV outputs (parking brake, reverse, and speed sense)
• Prewired AXSWC harness (AXSWC sold separately)

• Retains balance and fade†
• Can be used in non-amplified or amplified models (including Fender sound systems)
• Micro-B USB updatable

† Fade not retained in Fender sound systems

APPLICATIONS

INTERFACE COMPONENTS
• AXTO-VW1 interface • AXTO-VW1 harness
• 16-pin harness with stripped leads

TOOLS REQUIRED
• Crimping tool and connectors, or solder gun, solder, and heat shrink • Small flat-blade screwdriver • Tape • Wire cutter • Zip ties

Attention! Let the vehicle sit with the key out of the ignition for a few minutes before removing the factory radio. When testing the aftermarket equipment, ensure that all factory equipment is connected before cycling the key to ignition.
CONNECTIONS TO BE MADE

From the 16-pin harness to the aftermarket radio:

- Connect the Red wire to the accessory wire.
  
  Note: If installing an AXSWC (sold separately), connect the Red wire on the AXTO-VW1 harness as well.

- Connect the Orange/White wire to the illumination wire. (If the aftermarket radio has no illumination wire, tape off the Orange/White wire).

- Connect the Blue/White wire to the amp turn on wire (In models with a Fender amp, this wire must be connected to hear sound from the factory amplifier).

- Tape off and disregard the following (9) wires, they will not be used in this application Brown, White, White/Black, Gray, Gray/Black, Green, Green/Black, Purple, Purple/Black

The following wires are for aftermarket multimedia/navigation radios that provide these wires (if not required, tape them off and disregard them):

- Connect the Light Green wire to the parking brake wire (if applicable and not available on manual transmission).

- Connect the Blue/Pink wire to the speed sense wire (if applicable).

- Connect the Green/Purple wire to the reverse wire (if applicable).

From the AXTO-VW1 harness to the aftermarket radio:

- Connect the Black wire to the ground wire.

- Connect the Yellow wire to the battery wire.

- Connect the White wire to the left front positive speaker output.

- Connect the White/Black wire to the left front negative speaker output.

- Connect the Gray wire to the right front positive speaker output.

- Connect the Gray/Black wire to the right front negative speaker output.

- Connect the Green wire to the left rear positive speaker output.

- Connect the Green/Black wire to the left rear negative speaker output.

- Connect the Purple wire to the right rear positive speaker output.

- Connect the Purple/Black wire to the right rear negative speaker output.

12-pin pre-wired AXSWC harness:

- This harness is to be used along with the optional AXSWC (not included) to retain steering wheel audio controls. If the AXSWC is not being used, disregard this harness. If it will be used, please refer to the AXSWC instructions for radio connections and programming. Disregard the harness that comes with the AXSWC.
With the key in the off position:

- Connect the 16-pin harness with stripped leads, and the AXTO-VW1 harness, into the interface.
- If an AXSWC (sold separately) will be used, do not connect it until the AXTO-VW1 is programmed and fully functional.

**Attention!** Do not connect the AXTO-VW1 harness to the wiring harness in the vehicle just yet.

### Programming the AXTO-VW1

For the steps below, the L.E.D. located inside the interface can only be seen while active. The interface does not need to be opened to see the L.E.D.

1. Start the vehicle.
2. Connect the AXTO-VW1 harness to the wiring harness in the vehicle. The L.E.D. will initially be **Green** to indicate the interface is powered.
3. After a few seconds the L.E.D. will turn on solid **Red** while the interface automatically programs to the vehicle. The radio will shut off at this point. This process should take 5 to 30 seconds.
4. After the interface is programmed, the L.E.D. will turn on solid **Green**, and the radio will come back on, indicating programming was successful.
5. Test all functions of the installation for proper operation, before reassembling the dash.
6. If the interface fails to function, refer to “Troubleshooting”.

### Adjusting the AXTO-VW1

**Audio level adjustment (Fender amplified systems only):**

- With the vehicle and radio turned on, turn the volume up 3/4 of the way.
- With a small flat-blade screwdriver, adjust the potentiometer clockwise to raise the audio level; counterclockwise to lower the audio level.
- Once at a desired level, audio level adjustment is complete.

### Troubleshooting

**Resetting the Axxess interface**

1. The **Blue** reset button is located inside the Axxess interface, between the two connectors. The button is accessible outside the Axxess interface, no need to open the Axxess interface.
2. Press and hold the reset button for two seconds, then let go to reset the Axxess interface.
3. Refer to “Programming the Axxess Interface” from this point.
If you are having difficulties with the installation of this product, contact our Tech Support line either by phone at 1-800-253-TECH, or email at techsupport@metra-autosound.com. Before doing so, look over the instruction booklet a second time and ensure that the installation was performed exactly as the instruction booklet is stated. Have the vehicle apart and ready to perform troubleshooting steps before contacting Metra/Axxess Tech Support.
