Box Contents

Hardware

Wiring

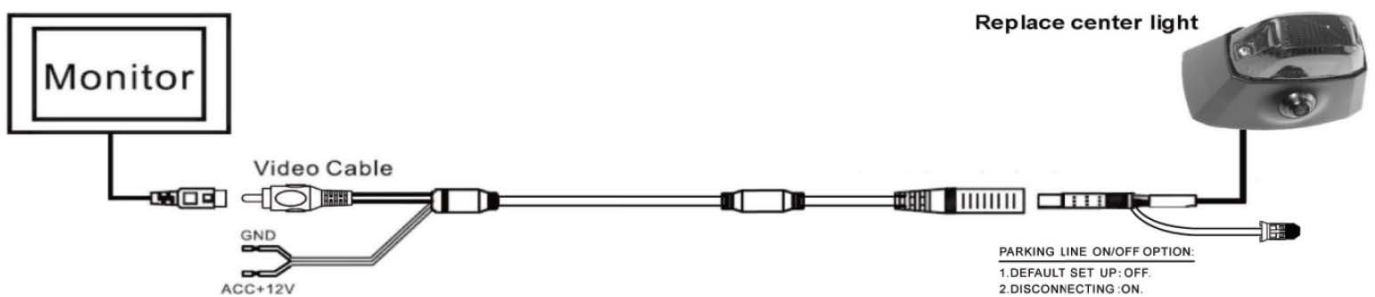

Camera, housing and mounting plate

Applications

- 2014-2017 RAM Promaster

Installation

1. To ease with installation, remove the interior light to gain access to the rear of the brake light

2. Remove (2) torx screws securing the left and right sides of the brake light, then unplug and remove the light. Take note that the light will be re-used in assembly.

3. The brake light connector will be extended through the TE-3BDP2 assembly in the following steps. The wiring harness in the vehicle may need tape cut loose from the wireloom to allow extra length to accomplish this step.

4. Pry out and remove the (2) plastic screw mounts.

5. Peel the tape from one side of the gasket provided, then apply it to the TE-3BDP mounting plate. Pull the brake light connector through the plate, peel the tape from the other side of the gasket, then secure the housing to the vehicle using the (2 of each) bolts, nuts, and washers provided.

6. Route the camera cable into the vehicle, then secure the TE-3BDP2 camera housing to the mounting plate using the (2) stainless steel screws provided.

7. Connect the brake light back to the factory brake light assembly, then secure the assembly to the TE-3BDP2 camera housing using the (2) stainless steel screws provided.

8. Reinstall the interior light, then route the camera cable to the monitor which will display the camera image. Connect the power wires and RCA jack.
 - a) Connect the **Black** wire to chassis ground.
 - b) Connect the **Red** wire to a positive reverse trigger.
 - c) Connect the **Yellow** RCA jack to the rearview camera or backup camera connection.

Test the TE-3BDP2 for proper functionality. If necessary, adjust the camera using the "U" shaped tool provided.
