## 1. Mirror

## 2. Specification

Screen size	4.5 inch
Display screen	Frameless TFT LCD panel
Brightness	Ultra high brightness 1700cdm
Display resolution	480(H)xRGBx272(V)
Display mode	16:9 / 4:3
Power consumption	4W
Working voltage	DC10-15V
Video input	AV1, AV2 (reverse camera)
Signal system	PAL / AUTO / NTSC

### **3. Operation**

- (1) The screen only works when it has video signal going into it. When AV1 input receives signal, the screen turns on to AV1. When the signal is removed, the screen turns off.
- (2) When AV2 receives video signal, the screen powers on and switches to AV 2, regardless of whether there is signal going into AV1. When signal is removed from AV2, either the screen will switch to AV1 if there is signal present there or switch off there is no signal.
- (3) The screen can adjust its brightness according to the ambient light condition. When ambient light is strong, the screen will be brighter. Similarly, the screen will decrease its brightness to protect your eyesight and so it isn't too bright while driving when the ambient light is low.

### **4. General Instruction**

This rear view mirror monitor is designed for car rear view purpose, which can work with a reversing camera (NTSC or PAL) to show the real-time image behind your car. When the reverse gear is engaged, the rear view system automatically starts to work, and when the monitor is powered off, the mirror functions just like a normal rear view mirror as the monitor is hidden and almost invisible.

## **IMPORTANT**

**If you are having difficulties with the installation of this product, please call our Tech Support line at 386-257-1187. Before doing so, look over the instructions a second time, and make sure the installation was performed exactly as the instructions are stated. Please have the vehicle apart and ready to perform troubleshooting steps before calling.**

### **Attention**

When connecting with power cable, please make sure not to mistake the positive and negative pole, otherwise the fuse will blow immediately for security protection. If it happens, please replace the blown fuse with a new one with same specification, after connecting properly to the right pole. Don't randomly increase the current rating of the fuse, and NEVER use metal wire as a substitute.
