

# **INSTRUCTIONS FOR TE-IFD SOFTWARE UPDATE**

*To enable or disable the motion detection function, the software will need to be updated. By applying the file with motion detection (cardvr\_117101802.elf) to the TE-IFD will enable the motion detection function, and applying the file without motion detection (cardvr\_117071701.elf) to disable the motion detection function. This update should only be done after a fully complete installation of the TE-IFD.*

**Step 1: Download the desired software and save it in the root layer of an empty USB drive.**

**Step 2: Connect the USB drive with WIFI USB cable, and power on the TE-IFD. It will then automatic update the software.**

**Step 3: A message will show "Do not power off the system is upgrading".**

**Step 4: Once finished will show "Upgrade complete".**

**Step 5: Remove USB drive.**
