7" REPLACEMENT MIRROR MONITOR

SALES 800-221-0932

PRODUCT OVERVIEW

iBeam is now offering a 7" monitor replacement mirror. It features a large built-in monitor that allows for viewing up to three separate cameras. The monitor offers 1280x480 resolution for clear viewing. The mirror kit includes wiring for analog triggers for each input and includes a popular windshield mount.

The triggers give the user the ability to trigger a visual of three different cameras using normal actions in the car; flip on the right or left blinker, those cameras can be activated, put the vehicle in reverse, the reverse camera can be activated. When in normal driving situations with no cameras activated, the mirror looks like a normal factory mirror.

- Large 7.3" built-in monitor for viewing multiple cameras
- 3 separate inputs for 3 individual cameras
- 3 analog triggers for each input
- Resolution: 1280x480
- Includes most widely used windshield mount

If vehicle does not have universal footprint on windshield, use TE-M06, sold separately
